DETAILED ACTION

Election/Restrictions

- I. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9, drawn to a control apparatus for a fire pump, classified in class 239, subclass 67.
 - II. Claim 10, drawn to a fire pump, classified in class 169, subclass 13.
 - III. Claims 21 and 22, drawn to an operation mode control apparatus for a fire pump, classified in class 417, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Groups I/II and Group III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require an operation mode switching unit and a mode setting delay unit. The subcombination has separate utility such as use as an operation mode control apparatus for a water pump in washing systems for automobiles.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 3752

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
